

Cantara Configuration Guide

The Cantara configuration guide describes the features available in the Cantara Administration Console to control one or more Cantara Server servers. The application allows you to define and manage three types of services to interact with an JD Edwards server: functions, queries, and reports.

The following topics provided detailed information about using the Cantara Administration Console:

- [Managing Farms](#) - Add, configure, and delete one or more instances of Cantara Server.
- [Managing Applications](#) - Add, configure and delete applications.
- [Managing Functions](#) - Create, test, and delete functions.
- [Managing Queries](#) - Create, test, and delete queries.
- [Managing Reports](#) - Create, define, test, and delete reports.
- [Managing Extensions](#) - Create, define and delete extension services.
- [Managing Notifications](#) - Create, define and delete Push Notifications.
- [Managing Routes](#) - Create, define and delete Route Services.
- [Managing Environments](#) - Define and delete environments.
- [Managing the Scheduler](#) - Manage requests, variables, and groups.
- [Definition Data Types](#) - Supported data types.
- [Searching for Components and Records](#) - How to search for components and records.
- [Exporting Data to a File](#) - How to export data to Microsoft Excel or PDF.
- [Managing Users](#) - How to create and delete users
- [Administration Console Configuration \(On-Premises only\)](#) - Base configuration for console
- [Tools](#) - Useful tools to execute functions, queries and report and to monitor its behaviour.
- [User Portal Application](#) - Self-service application for Cantara proxy users to reset forgot password and download applications
