

# Installing the Cantara Administration Console Web Application

## Extracting the Cantara Administration Console Archive

The Cantara Administration Console is distributed as a .ZIP archive file that must be extracted prior to deployment on your web application. Extract the archive file into the appropriate folder on your web application server. Refer to [Setting Up Cantara Administration Console File System Folders](#) for folder requirements.

### Folder Permissions

Make sure the user that the web application server runs as has both read and write permissions to the application folder contents.
